Fallout from the Monsanto Roundup Verdicts: Present and Future Impact of Glyphosate's Health Risks, Litigation, and Coverage Issues

Our attorneys will explore the background science and the industry history, as well as the regulatory setting, taking us to this point of mass tort litigation. They will review the first three key cases setting a precedent and headlines for Roundup litigation. An analysis will be given of where Glyphosate litigation is going, and the likely other types of claims and potential defendants to be implicated in this growing mass tort. This program will also give an overview of insurance and reinsurance coverage issues for the multi-billion dollar Glyphosate exposure.
